

Reimagining TABot: Effectively Engaging Students

Road Map

Introduction

Users vs Non-Users: Performance Breakdown

Users Utilization Assessment & Segmentation

Recommendations

TABot: A Smart Study Assistant

Reminds students about assignments & deadlines

Tracks progress and provides insights

Answers questions via a built-in chatbot

Encourages engagement through gamification

TABot helps students stay organized, but **does it truly enhance learning outcomes?**

Bridging the Gap

Challenges

Low Engagement

Limited Features

Lack of Personalization

Outcomes

Develop strategies to keep students active

Optimize TABot's chatbot, leaderboard, and UI

Tailor engagement based on student performance

Identifying Different User Groups

Metric Selection

Avg Final Score

Avg Test Score

Avg Assignment
Score

GPA

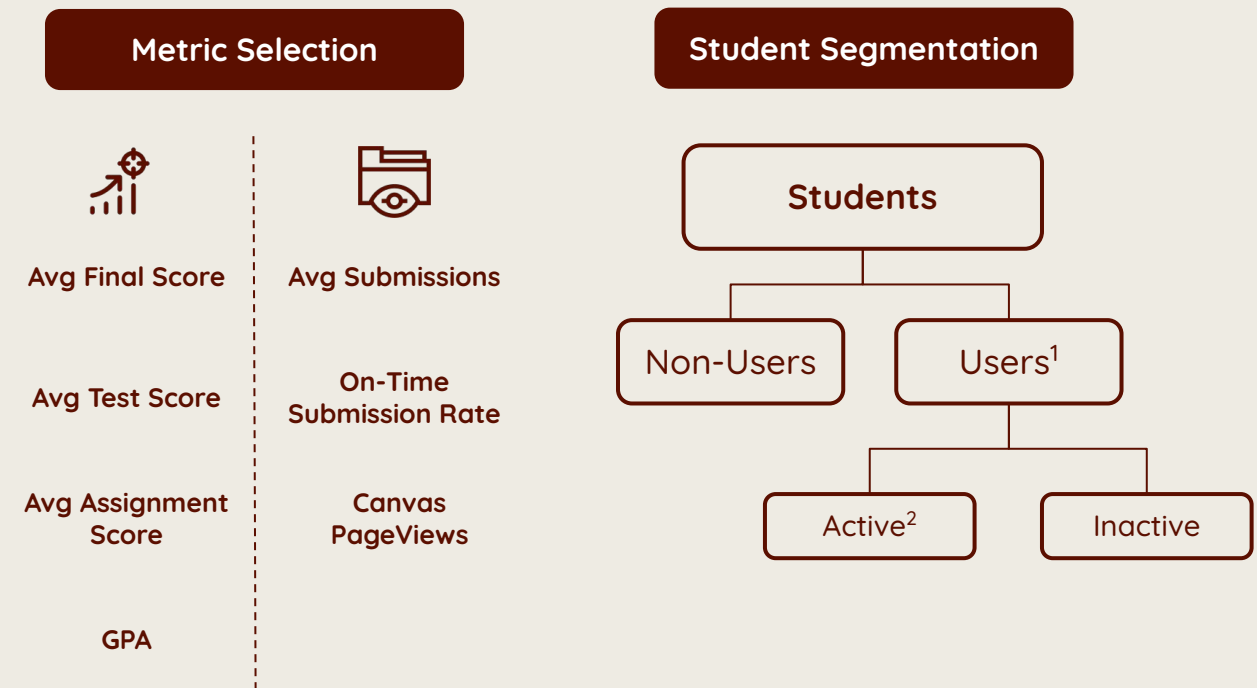

Avg Submissions

On-Time
Submission Rate

Canvas
PageViews

1. User and Non-User cohorts are created using IfRegister column in the provided dataset
2. Users with more than 34 (50th percentile) of Activity_All (total of all kinds of pageviews throughout the experiment) values have been grouped as 'Active' users

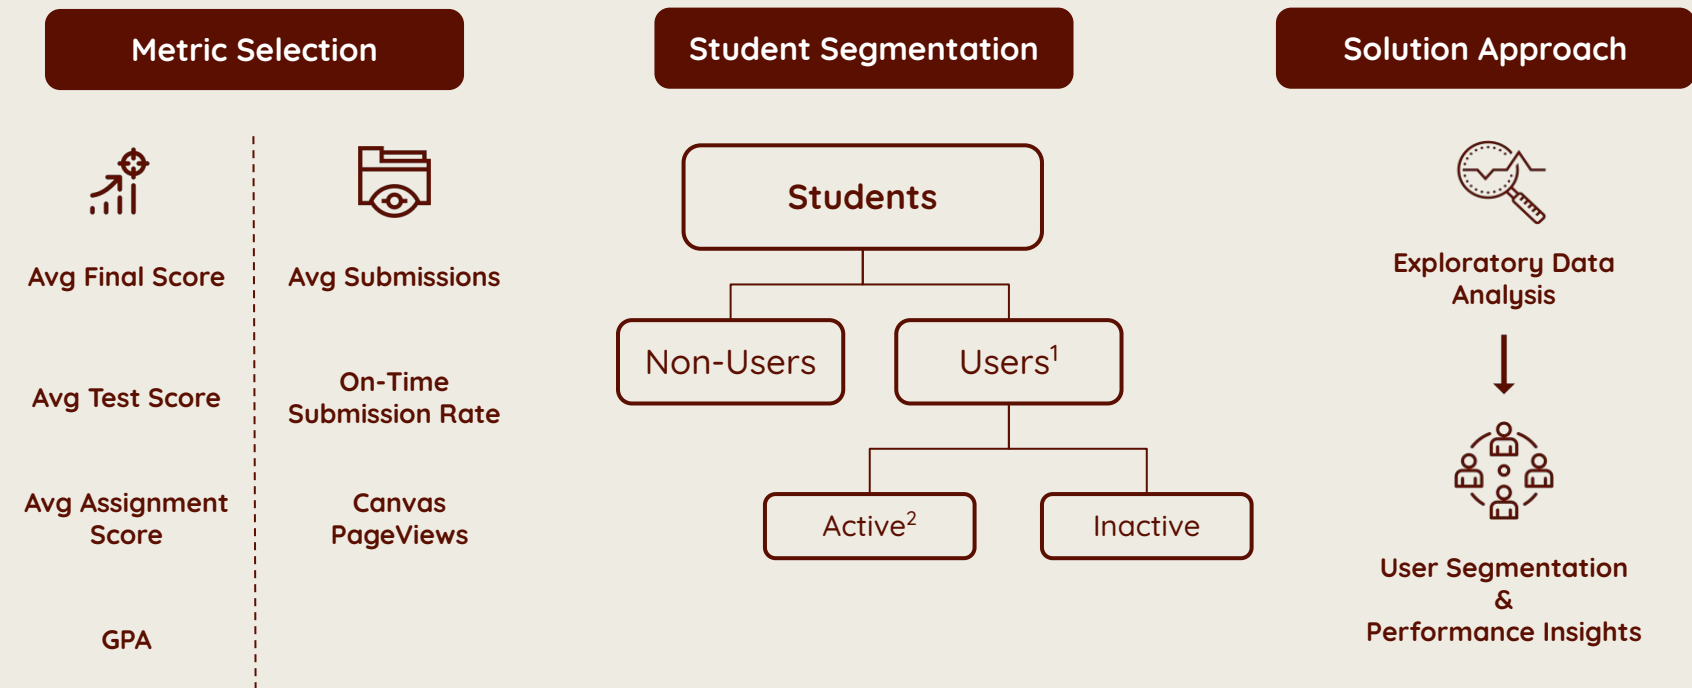

Identifying Different User Groups

1. User and Non-User cohorts are created using IfRegister column in the provided dataset

2. Users with more than 34 (50th percentile) of Activity_All (total of all kinds of pageviews throughout the experiment) values have been grouped as 'Active' users

Identifying Different User Groups

1. User and Non-User cohorts are created using IfRegister column in the provided dataset

2. Users with more than 34 (50th percentile) of Activity_All (total of all kinds of pageviews throughout the experiment) values have been grouped as 'Active' users

Road Map

Introduction

Users vs Non-Users: Performance Breakdown

Users Utilization Assessment & Segmentation

Recommendations

TABot Users Outperform Non-Users

Metrics	Users	Non-Users
Student Count	473	141
Avg Final Score	89.8	86.8
Avg Test Score	83.9	80.8
Avg Assignment Score	94.0	91.4
On-Time Submission Rate	68.0%	61.8%
Avg Canvas PageViews	1,336	1,013

Statistical analysis **corroborates our hypothesis**, confirming significant performance differences between Users and Non-Users across all of the metrics

Road Map

Introduction

Users vs Non-Users: Performance Breakdown

Users Utilization Assessment & Segmentation

Recommendations

High Activity Users Perform Better

On-Time Submission Rate

Avg Number of Submissions

*Statistical analysis **proves significant performance** differences active and inactive users across both metrics*

High Activity Users Perform Better

*Statistical analysis **proves significant performance** differences active and inactive users across both metrics*

Students End Up Losing Interest

Weekly User Count for Semester 1

Weekly User Count for Semester 2

— Frequent Users — Occasional Users

Road Map

Introduction

Users vs Non-Users: Performance Breakdown

Users Utilization Assessment &

Segmentation

Recommendations

User Segmentation & Performance Insights

1. High Performers and Low Performers Group have been identified using user(student) segmentation based on their assignment submissions, GPA and test scores

2. Users with more than 34 (50th percentile) of Activity_All (total of all kinds of pageviews throughout the experiment) values have been grouped as 'Active' users

Road Map

Introduction

Users vs Non-Users: Performance Breakdown

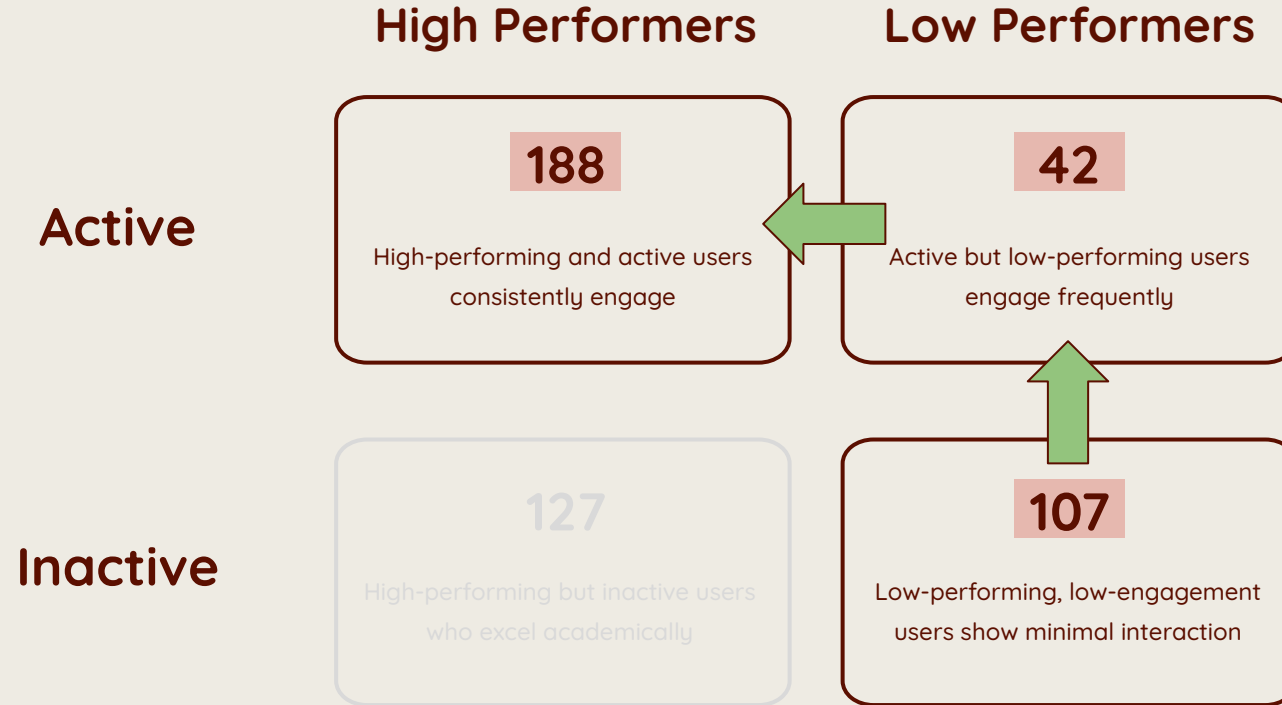

Users Utilization Assessment & Segmentation

Recommendations

Recommendation 1: Data-Driven Personalization

Nudge The Right Students The Right Way

Data-Driven Personalization

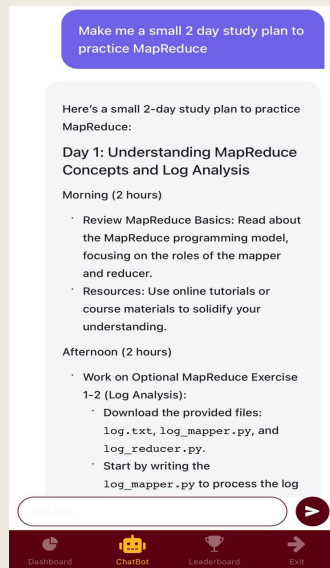

Tailored Notifications & Messaging

- Frequent reminders, goal tracking, and assignment alerts to **activate low performers**
- Personalized emails highlighting TABot's value to **engage non-users**

Custom Study Plans

- Leverage Canvas data to **identify weak areas** and offer personalized study plans
- TABot can already provide learning roadmaps at this moment as well, but only when explicitly requested.
- **Guide low performers** with structured learning paths for steady improvement

Recommendation 2: Engagement & Gamification

Making Learning Addictive (In a Good Way!)

Engagement & Gamification

Boosting Activity Through Gamification

- Duolingo-style engagement mechanics → streaks, rewards, and interactive challenges
- Gopher Moods (a reactive avatar that reflects student activity, getting sad when the app is ignored) and instant quizzes (short extra-credit questions via notifications) **encourage frequent student engagement**
- In-app challenges & leaderboard progression tips → **increase retention**

Optimizing Navigation & User Flow

- Leverage feature usage insights: Dashboard → Chatbot → Leaderboard
- Dynamically direct users to the most relevant tabs for their needs

Recommendation 3: Improving UI/UX

Looks Matter, Experience Counts!

Improving UI/UX

Enhancing Chatbot Performance

- Make chatbot faster & more context-aware by **improving response speed & relevance**
- Enable **adaptive conversations** based on student behavior

Refining the Dashboard

- Display **key insights upfront**: progress tracking, study recommendations, leaderboard ranking
- Ensure a **clear and intuitive UI** that promotes **habitual engagement**

Thank You!
